

BASIC TRAINING COURSE ON VEDA-TIMES**24 - 26 NOVEMBER 2021, WEB TRAINING, 08.00AM - 01.00PM CET**

Participation fee: Each course is free of charge for ETSAP Contracting Parties. The following training fees apply: Participants from

- Companies €1200
- Institutions €1000
- University Staff €750
- Private persons €750
- Students/PhD €300 per person per course.

Payment is only possible through bank transfer to the ETSAP operating agent.

Note: VEDA2.0 and GAMS have to be installed prior to the training course on your laptop, following the instruction that will be provided two weeks in advance

TRAINER: MR MAURIZIO GARGIULO (gargiulo.maurizio@gmail.com)

WEDNESDAY 24 NOVEMBER - INTRODUCTION AND BASE ELEMENTSFirst session 08.00-09.45

- Presentation of the program and round table
- Introduction to the TIMES model generator – Part I

Break 09.45-10.00

Second session 10.00-11.30

- Introduction to the TIMES model generator – Part II
- Overview of VEDA2.0

Break 11.30-11.45

Third session 11.45-13.00

- The VEDA2.0-TIMES DemoS models: supply curve
 - Browsing the DemoS_001
 - Base year templates and SysSetting for data input

THURSDAY 25 NOVEMBER - USING THE STEP DEMO MODELSFirst session 08.00-09.45

- The VEDA2.0-TIMES DemoS models: supply curve
 - Running the DemoS_001
 - Results Functionality
 - Exercises

Break 09.45-10.00

ANNEX XV: ENERGY SYSTEMS AND SUSTAINABLE DEVELOPMENT GOALS

Second session 10.00-11.30

- VEDA scenario templates
 - Regular scenarios (insert and update transformation tables)
 - SubRes template
 - Exercises: building alternative scenarios

Break 11.30-11.45

Third session 11.45-13.00

- The VEDA2.0-TIMES DemoS: electricity generation sector
 - How to include the generation sector in VEDA-TIMES
 - Running the model and analysing results

FRIDAY 26 NOVEMBER - MULTI-REGIONAL MODEL AND USER CONSTRAINTS

First session 08.00-09.45

- Presentation/ Hands-on: Multi-regional approach in VEDA-TIMES

Break 09.45-10.00

Second session 10.00-11.30

- User constraints in TIMES
- Example of user constraints in VEDA2.0-TIMES
 - Absolute constraint
 - Share constraint

Break 11.30-11.45

Third session 11.45-13.00

- Exercises with Demo models

REFERENCES

TIMES Documentation and Demo Models

- Part I: [TIMES concepts and theory](#)

Part I provides a general description of the TIMES paradigm, with emphasis on the model's general structure and its economic significance. Part I also includes a simplified mathematical formulation of TIMES, a chapter comparing it to the MARKAL model, pointing to similarities and differences, and chapters describing new model options.

- Part II: [Comprehensive Reference Manual](#)

Part II constitutes a comprehensive reference manual intended for the technically minded modeler or programmer looking for an in-depth understanding of the complete model details, in particular the relationship between the input data and the model mathematics, or contemplating making changes to the model's equations. Part II includes a full description of the sets, attributes, variables, and equations of the TIMES model.

- Part III: [The Operation of the TIMES code \(organization of the TIMES modelling environment\)](#)

Part III describes the organization of the TIMES modeling environment and the GAMS control statements required to run the TIMES model. GAMS is a modeling language that translates a TIMES database into the Linear Programming matrix, and then submits this LP to an optimizer and generates the result files. Part III describes how the routines comprising the TIMES source code guide the model through compilation, execution, solve, and reporting; the files produced by the run process and their use; and the various switches that control the execution of the TIMES code according to the model instance, formulation options, and run options selected by the user. It also includes a section on identifying and resolving errors that may occur during the run process.

- Part IV: [VEDA 2.0](#)

Part IV provides a step-by-step introduction to building a TIMES model in the VEDA2.0 user interface for model management and results analysis. It first offers an orientation to the basic features of VEDA2.0, including software layout, data files and tables, and model management features, both for handling the input and examining the results. It then describes in detail twelve Demo models (available below) that progressively introduce VEDA-TIMES principles and modeling techniques
