

2015

(32 000 downloads of
chapters or book)

2018

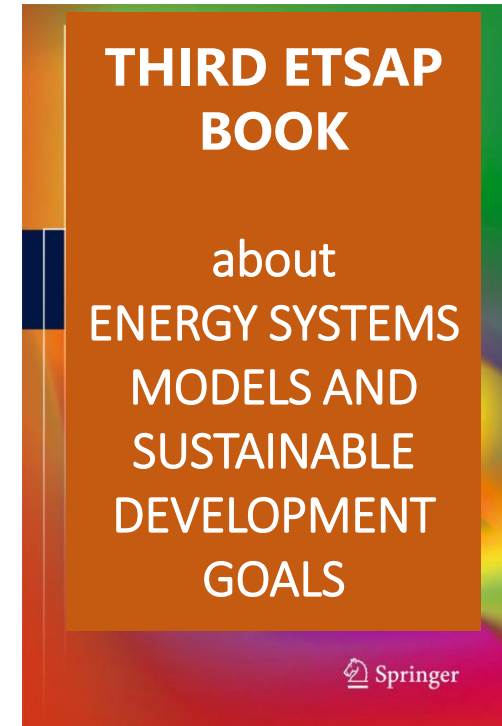

(21 000 downloads)

Springer already confirmed its interest given the success of the first two books

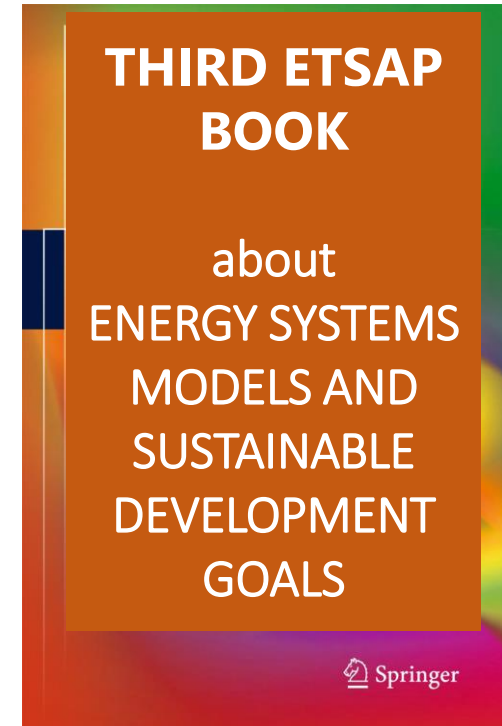

First call: 14 chapters proposed by 12 teams of IEA-ETSAP researchers.
A second call will be launched if the project is selected.

Publication expected by Spring 2024

Innovative: innovative insights into technology, behaviour, social and economic changes needed to reach the SDGs, and more particularly SDG7

Benefit to project partners and ETSAP community: visibility to a large scientific community, beyond the usual IEA-ETSAP community (*e.g. second book mentioned in IPCC Special Report on Global Warming of 1.5°C*)

Thanks
